

# PLANT FIBER TABLEWARE

- 100% biodegradable, certified compostable (BPI)
- Made from bamboo, wood fiber, and starch
- Available in multiple sizes and shapes
- Oven & microwave safe
- Paper-like consistency
- Grease-resistant

## FREE FROM HARMFUL CHEMICALS (PFAS)

Other brands use fluorinated chemicals derived from Teflon, that accumulate in the environment and are linked to health issues. Greenlid uses long fiber technology to make our tableware oil-resistant and leak-proof safely and naturally.

Plant fiber is a raw material left over from the harvest of various plants. The material is ideal for molding into food service items such as plates, bowls, and cups. The products created from this process are 100% biodegradable and compostable. Unlike paper products, no trees were cut down to make our tableware. Plant fiber is a sustainable, high-quality option for disposable tableware, especially when compared to other materials like single-use plastics and styrofoam, which are non-biodegradable and often end up in our landfills.
